APPENDIX

Ш

Are PAXTON Agricultural products recyclable?

All our products are made from Polyethylene (PE) which is 100% recyclable.

What proportion of the products are recycled materials?

Various ratios of recycled polymer are used in our products dependent on colour, customer requirements and the intended application. When requested at the point of order we can usually guarantee a recycled content of 100% on black products.

Are Paxton products suitable for pigs?

In most cases Paxton products are fine for use by pigs, however, we do

not guarantee them against being chewed.

What is the Byelaw 30 Kit?

The Byelaw 30 Kit is used in order to comply with the Byelaw 30 Regulation and is specifically used

when connecting a tank to a mains water supply. The Byelaw 30 kit maintains the quality of the water in the tank.

The kit prevents water contamination with an insect proof screened vent and prevents back-flow of stored water into the mains (potable) supply.

Orders and delivery

All fully completed orders are processed within 24hrs. The majority of products are made to order. Please allow 2-3 weeks for delivery.

APPENDIX

QUALITY

Ш

Materials

Durability

Moulded polyethylene (PE) is extremely durable with outstanding impact, fracture and shatter resistance properties. These mechanical properties are tested to BS 2782.

Manufacturing Standard

(As applicable) All Paxton products are manufactured to BS EN ISO 9001:2015. Plastic materials: Mechanical properties tested to BS 2782.

Hot dipped galvanised: BS 729 Powder coating: BS 3900 Zinc coating: BS 1706

Weather Stability

PE is ideal for external applications. Materials used are UV stabilised to meet the demands of Northern Hemisphere weather conditions.

Maintenance Free

The solid body colour is permanently moulded-in, eliminating the need for maintenance painting. Units are wear resistant; scratches and parking nudges are less evident.

Recycling

Polyethylene (PE) is an environmentally friendly material and is 100% recyclable. Paxton products can be manufactured using recycled materials where appropriate.

Cleaning

Products should be flushed with clean water and then washed with a mild detergent solution using a bristle brush or sponge. Care should be taken not to apply undue pressure that may damage labels. Flush clean with water after washing.

Chemical Resistance

The material is resistant to most acids, salts and solvents. Environmental elements such as acid rain, soot, diesel fumes, salt and seawater will not corrode PE. Please visit our website for full details.
